

Saab 9³ 2003+ Armrest Powerport

Congratulations! You now have the cable that will enable you to have power on demand from your armrest.

This assumes you have a circular blank plate in your armrest. Now you can plug anything that requires power into the armrest, and hide the bulky plug out of sight. This option is available to all 2003+ 9-3 vehicles. This is not an add-on feature, it is a replacement for something that didn't come with your vehicle.

Your package features:

- an armrest powerport featuring designed connectors to properly interface with the vehicle, manufactured with original equipment parts,
- cable-ties to secure the cable so it is safe & rattle-free,
- installation instructions for your dealer.

You can find detailed step-by-step installation instructions at:
